

## INDEX

Absolute addresses .....	Exchanges control .....	exctl(2) .....	109
accept(2) .....	Accepts a connection on a socket .....	accept(2) .....	29
Accepts a connection on a socket .....	Accepts a connection on a socket .....	accept(2) .....	29
Access control list .....	Gets access control list entries for file .....	getfac1(2) .....	144
Access control list .....	Removes an access control list from a file .....	rmfac1(2) .....	366
Access control list .....	Sets access control list for file .....	setfac1(2) .....	398
Access permission .....	Changes the mode of a file .....	chmod(2) .....	71
access(2) .....	Determines accessibility of a file .....	access(2) .....	33
Accesses or manipulates network security information .....	Accesses or manipulates network security information .....	nsecctl(2) .....	284
Accesses shared memory identifier .....	Accesses shared memory identifier .....	shmget(2) .....	457
Accesses the message queue .....	Accesses the message queue .....	msgget(2) .....	269
Account IDs .....	Changes account ID of a process .....	acctid(2) .....	42
Account IDs .....	Changes disk file account ID .....	chacid(2) .....	56
Accounting .....	Enables or disables job accounting .....	jacct(2) .....	219
Accounting .....	Provides multitasking execution overlap profile .....	mtimes(2) .....	277
Accounting .....	Checks status of, enables, and disables process, daemon, and record accounting .....	acctctl(2) .....	39
Accounting .....	Gets process and child process times .....	times(2) .....	550
Accounting .....	Writes an accounting record to the kernel accounting file or to a daemon accounting file .....	wracct(2) .....	588
Accounting .....	Enables or disables process and daemon accounting .....	dacct(2) .....	97
Accounting .....	Controls device accounting .....	devacct(2) .....	99
acct(2) .....	Enables or disables process accounting .....	acct(2) .....	37
acctctl(2) .....	Checks status of, enables, and disables process, daemon, and record accounting .....	acctctl(2) .....	39
acctid(2) .....	Changes account ID of a process .....	acctid(2) .....	42
Active categories .....	Sets active categories of a process .....	setucat(2) .....	434
Active compartments .....	Sets active compartments of the process .....	setucmp(2) .....	436
Active security level .....	Sets the active security level of the process .....	setulvl(2) .....	442
adjtime(2) .....	Corrects the time to allow synchronization of the system clock .....	adjtime(2) .....	44
alarm(2) .....	Sets a process alarm clock .....	alarm(2) .....	46
Allocates storage for a file .....	Allocates storage for a file .....	malloc(2) .....	211
Asynchronous I/O .....	Performs asynchronous read from a file .....	reada(2) .....	333
Asynchronous I/O .....	Performs asynchronous write on a file .....	writea(2) .....	596
Attaches shared memory segment .....	Attaches shared memory segment .....	shmat(2) .....	447
Auditing .....	Gets security attributes .....	getsysv(2) .....	189
Authorized categories .....	Sets active categories of a process .....	setucat(2) .....	434
Authorized compartments .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
Authorized compartments .....	Sets active compartments of the process .....	setucmp(2) .....	436
Backdoor channel .....	Opens a file for reading or writing .....	open(2) .....	287
bind(2) .....	Binds a name to a socket .....	bind(2) .....	49
Binds a name to a socket .....	Binds a name to a socket .....	bind(2) .....	49

Block special devices .....	Unmounts a file system .....	umount(2) .....	560
Block special files .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Block special files .....	Mounts a file system .....	mount(2) .....	262
Blocks .....	Changes size of secondary data segment .....	ssbreak(2) .....	497
brk(2) .....	Changes data segment space allocation .....	brk(2) .....	53
bsdsignal(2) .....	Changes action associated with a signal .....	signal(2) .....	470
bsdsigpause(2) .....	Releases blocked signals and waits for interrupt .....	sigsuspend(2) .....	483
Buffers .....	Reads from file .....	read(2) .....	329
Buffers .....	Reads or writes to secondary data segment .....	ssread(2) .....	500
Calling processes .....	Executes a file .....	exec(2) .....	111
Categories .....	Sets active categories of a process .....	setucat(2) .....	434
chacid(2) .....	Changes disk file account ID .....	chacid(2) .....	56
Changes a directory by using the inode number .....	Changes a directory by using the inode number .....	chdir(2) .....	61
Changes account ID of a process .....	Changes account ID of a process .....	acctid(2) .....	42
Changes action associated with a signal .....	Changes action associated with a signal .....	signal(2) .....	470
Changes data segment space allocation .....	Changes data segment space allocation .....	brk(2) .....	53
Changes disk file account ID .....	Changes disk file account ID .....	chacid(2) .....	56
Changes owner and group of a file .....	Changes owner and group of a file .....	chown(2) .....	75
Changes priority of processes .....	Changes priority of processes .....	nice(2) .....	281
Changes size of secondary data segment .....	Changes size of secondary data segment .....	ssbreak(2) .....	497
Changes the mode of a file .....	Changes the mode of a file .....	chmod(2) .....	71
Changes the name of a file .....	Changes the name of a file .....	rename(2) .....	352
Changes the root directory .....	Changes the root directory .....	chroot(2) .....	79
Changes working directory .....	Changes working directory .....	chdir(2) .....	58
Channels .....	Creates an interprocess channel .....	pipe(2) .....	307
Character special files .....	Controls device .....	ioctl(2) .....	214
Character special files .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Character special files .....	Mounts a file system .....	mount(2) .....	262
chdir(2) .....	Changes working directory .....	chdir(2) .....	58
chdiri(2) .....	Changes a directory by using the inode number .....	chdiri(2) .....	61
Checkpoints a process, multitask group, or job .....	Checkpoints a process, multitask group, or job .....	chkpnt(2) .....	63
Checks status of, enables, and disables process, daemon, and record accounting .....	Checks status of, enables, and disables process, daemon, and record accounting .....	acctctl(2) .....	39
Child jobs .....	Gets information about a terminated child job .....	waitjob(2) .....	586
Child processes .....	Waits for a child process to stop or terminate .....	wait(2) .....	580
chkpnt(2) .....	Checkpoints a process, multitask group, or job .....	chkpnt(2) .....	63
chmem(2) .....	Retrieves or modifies system physical memory availability .....	chmem(2) .....	69
chmod(2) .....	Changes the mode of a file .....	chmod(2) .....	71
chown(2) .....	Changes owner and group of a file .....	chown(2) .....	75
chroot(2) .....	Changes the root directory .....	chroot(2) .....	79
Clock ticks .....	Gets process and child process times .....	times(2) .....	550
Clocks .....	Gets or sets date and time .....	gettimeofday(2) .....	194
Clocks .....	Corrects the time to allow synchronization of the system clock .....	adjtime(2) .....	44
Clocks .....	Sets a process alarm clock .....	alarm(2) .....	46

Clocks .....	Gets time .....	time(2) .....	548
close(2) .....	Closes a file descriptor .....	close(2) .....	81
Closes a file descriptor .....	Closes a file descriptor .....	close(2) .....	81
cmptext(2) .....	Compares the supplied character sequence with the privilege text of the calling process .....	cmptext(2) .....	82
Compares the supplied character sequence with the privilege text of the calling process .....	Compares the supplied character sequence with the privilege text of the calling process .....	cmptext(2) .....	82
Compartments .....	Sets file security label and security flag attributes .....	setdevs(2) .....	395
Compartments .....	Sets file compartments .....	setfcmp(2) .....	402
Compartments .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
Compartments .....	Sets security validation attributes of the process .....	setusrv(2) .....	444
Configurable limits .....	Sets resource limits .....	limit(2) .....	227
Configurable limits .....	Determines value of file or directory limit .....	pathconf(2) .....	299
connect(2) .....	Initiates a connection on a socket .....	connect(2) .....	84
Connection acceptance .....	Accepts a connection on a socket .....	accept(2) .....	29
Connections .....	Manages pty reconnection .....	ptyrecon(2) .....	320
Controls and reports the status of major guest system functions .....	Controls and reports the status of major guest system functions .....	guestctl(2) .....	202
Controls device .....	Controls device .....	ioctl(2) .....	214
Controls device accounting .....	Controls device accounting .....	devacct(2) .....	99
Controls execution of processes .....	Controls execution of processes .....	suspend(2) .....	518
Controls open files .....	Controls open files .....	fcntl(2) .....	121
Corrects the time to allow synchronization of the system clock .....	Corrects the time to allow synchronization of the system clock .....	adjtime(2) .....	44
cpselect(2) .....	Selects which processors may run the process .....	cpselect(2) .....	88
CPU allocation policy .....	Returns or sets information on the CPU allocation policy .....	policy(2) .....	312
CPU resources .....	Obtains current resource limit information .....	getlim(2) .....	160
CPU time .....	Sets user-controllable resource limits .....	setlim(2) .....	411
creat(2) .....	Creates a new file or rewrites an existing one .....	creat(2) .....	90
Creates a link to a file .....	Creates a link to a file .....	link(2) .....	235
Creates a multitasking process .....	Creates a multitasking process .....	_tfork(2) .....	545
Creates a new file or rewrites an existing one .....	Creates a new file or rewrites an existing one .....	creat(2) .....	90
Creates a new process .....	Creates a new process .....	fork(2) .....	131
Creates a new process in a memory efficient way .....	Creates a new process in a memory efficient way .....	vfork(2) .....	577
Creates a pair of connected sockets .....	Creates a pair of connected sockets .....	socketpair(2) .....	495
Creates an endpoint for communication .....	Creates an endpoint for communication .....	socket(2) .....	488
Creates an interprocess channel .....	Creates an interprocess channel .....	pipe(2) .....	307
Creates session and sets process group ID .....	Creates session and sets process group ID .....	setsid(2) .....	430
Current operating system .....	Gets name of current operating system .....	uname(2) .....	562
cutimes(2) .....	Updates user execution time .....	cutimes(2) .....	94
dacct(2) .....	Enables or disables process and daemon accounting .....	dacct(2) .....	97

Daemons .....	Checks status of, enables, and disables process, daemon, and record accounting .....	acctctl(2) .....	39
Daemons .....	Enables or disables process and daemon accounting ....	dacct(2) .....	97
Data migration .....	Sets and gets data migration retrieval mode .....	dmemode(2) .....	102
Data migration .....	Processes offline file requests .....	dmofrq(2) .....	103
Data segments .....	Changes data segment space allocation .....	brk(2) .....	53
Dates .....	Gets or sets date and time .....	gettimeofday(2) .....	194
Dates .....	Sets time .....	stime(2) .....	517
Detaches shared memory segment .....	Detaches shared memory segment .....	shmctl(2) .....	455
Determines accessibility of a file .....	Determines accessibility of a file .....	access(2) .....	33
Determines value of file or directory limit ...	Determines value of file or directory limit .....	pathconf(2) .....	299
devacct(2) .....	Controls device accounting .....	devacct(2) .....	99
Device accounting .....	Controls device accounting .....	devacct(2) .....	99
Device control functions .....	Controls device .....	ioctl(2) .....	214
Device numbers .....	Gets device number or driver entry .....	getdevn(2) .....	143
Device numbers .....	Changes a directory by using the inode number .....	chdir(2) .....	61
Device special files .....	Sets file security label and security flag attributes .....	setdevs(2) .....	395
Devices .....	Opens a file by using the inode number .....	openi(2) .....	297
Directories .....	Reads and formats directory entries as file system independent .....	getdents(2) .....	141
Directories .....	Makes a directory .....	mkdir(2) .....	254
Directories .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Directories .....	Removes a directory .....	rmdir(2) .....	363
Directories .....	Changes working directory .....	chdir(2) .....	58
Directories .....	Changes a directory by using the inode number .....	chdir(2) .....	61
Directory entries .....	Creates a link to a file .....	link(2) .....	235
Directory entries .....	Removes directory entry .....	unlink(2) .....	564
Directory limits .....	Determines value of file or directory limit .....	pathconf(2) .....	299
Discretionary access control .....	Removes an access control list from a file .....	rmfacl(2) .....	366
Discretionary access control .....	Sets access control list for file .....	setfacl(2) .....	398
Disk files .....	Changes disk file account ID .....	chacid(2) .....	56
Disk quotas .....	Manipulates file system quotas .....	quotactl(2) .....	322
dmemode(2) .....	Sets and gets data migration retrieval mode .....	dmemode(2) .....	102
dmofrq(2) .....	Processes offline file requests .....	dmofrq(2) .....	103
Driver names .....	Gets device number or driver entry .....	getdevn(2) .....	143
dup(2) .....	Duplicates an open file descriptor .....	dup(2) .....	107
Duplicates an open file descriptor .....	Duplicates an open file descriptor .....	dup(2) .....	107
Effective group IDs .....	Gets real user, effective user, real group, or effective group IDs .....	getuid(2) .....	197
Effective group IDs .....	Sets real or effective group ID .....	setregid(2) .....	423
Effective group IDs .....	Sets user or group IDs .....	setuid(2) .....	438
Effective group IDs .....	Creates a new file or rewrites an existing one .....	creat(2) .....	90
Effective user IDs .....	Gets real user, effective user, real group, or effective group IDs .....	getuid(2) .....	197
Effective user IDs .....	Sets real or effective user ID .....	setreuid(2) .....	426
Effective user IDs .....	Sets user or group IDs .....	setuid(2) .....	438
Effective user IDs .....	Creates a new file or rewrites an existing one .....	creat(2) .....	90
Enables or disables job accounting .....	Enables or disables job accounting .....	jacct(2) .....	219
Enables or disables process accounting .....	Enables or disables process accounting .....	acct(2) .....	37

Enables or disables process and daemon accounting	Enables or disables process and daemon accounting ..... <i>dacct(2)</i>	97
Entries	Makes security log entry ..... <i>slgentry(2)</i>	486
<i>errno</i>	Introduces system calls and error numbers ..... <i>intro(2)</i>	1
Error codes	Introduces system calls and error numbers ..... <i>intro(2)</i>	1
Error returns	Introduces system calls and error numbers ..... <i>intro(2)</i>	1
Examines and changes blocked signals	Examines and changes blocked signals ..... <i>sigprocmask(2)</i>	479
Examines or changes action associated with a signal	Examines or changes action associated with a signal ..... <i>sigaction(2)</i>	462
Examines synchronous I/O multiplexing	Examines synchronous I/O multiplexing ..... <i>select(2)</i>	374
Exchanges control	Exchanges control ..... <i>exctl(2)</i>	109
<i>exctl(2)</i>	Exchanges control ..... <i>exctl(2)</i>	109
<i>exec(2)</i>	Executes a file ..... <i>exec(2)</i>	111
<i>exec1(2)</i>	Executes a file ..... <i>exec(2)</i>	111
<i>execle(2)</i>	Executes a file ..... <i>exec(2)</i>	111
<i>execlp(2)</i>	Executes a file ..... <i>exec(2)</i>	111
Executes a file	Executes a file ..... <i>exec(2)</i>	111
Execution	Selects which processors may run the process ..... <i>cpselect(2)</i>	88
Execution time	Updates user execution time ..... <i>cutimes(2)</i>	94
Execution time profile	Generates an execution time profile ..... <i>profil(2)</i>	314
<i>execv(2)</i>	Executes a file ..... <i>exec(2)</i>	111
<i>execve(2)</i>	Executes a file ..... <i>exec(2)</i>	111
<i>execvp(2)</i>	Executes a file ..... <i>exec(2)</i>	111
<i>_exit(2)</i>	Terminates process ..... <i>exit(2)</i>	118
<i>exit(2)</i>	Terminates process ..... <i>exit(2)</i>	118
<i>fchmod(2)</i>	Changes the mode of a file ..... <i>chmod(2)</i>	71
<i>fchown(2)</i>	Changes owner and group of a file ..... <i>chown(2)</i>	75
<i>fcntl(2)</i>	Controls open files ..... <i>fcntl(2)</i>	121
<i>fgetpal(2)</i>	Gets the privilege assignment list (PAL) and privilege sets of a file ..... <i>fgetpal(2)</i>	130
FIFO special files	Makes a directory or a special or regular file ..... <i>mknod(2)</i>	257
FIFO special files	Opens a file for reading or writing ..... <i>open(2)</i>	287
File access time	Sets file access and modification times ..... <i>utime(2)</i>	573
File concatenation	Joins files ..... <i>join(2)</i>	221
File creation masks	Sets and gets file creation mask ..... <i>umask(2)</i>	558
File descriptors	Duplicates an open file descriptor ..... <i>dup(2)</i>	107
File descriptors	Synchronizes the in-core state of a file with that on disk ..... <i>fsync(2)</i>	138
File descriptors	Opens a file for reading or writing ..... <i>open(2)</i>	287
File descriptors	Examines synchronous I/O multiplexing ..... <i>select(2)</i>	374
File descriptors	Closes a file descriptor ..... <i>close(2)</i>	81
File limits	Determines value of file or directory limit ..... <i>pathconf(2)</i>	299
File links	Makes a symbolic link to a file ..... <i>symlink(2)</i>	522
File names	Changes the name of a file ..... <i>rename(2)</i>	352
File pointers	Moves read/write file pointer ..... <i>lseek(2)</i>	249
File requests	Processes offline file requests ..... <i>dmofrq(2)</i>	103
File security	Gets file security attributes ..... <i>secstat(2)</i>	371
File security	Sets security level of a file ..... <i>setflvl(2)</i>	407
File status flags	Opens a file for reading or writing ..... <i>open(2)</i>	287

File system quotas .....	Manipulates file system quotas .....	quotactl(2) .....	322
File systems .....	Reads and formats directory entries as file system		
	independent .....	getdents(2) .....	141
File systems .....	Gets file system information .....	statfs(2) .....	509
File systems .....	Gets file system type information .....	sysfs(2) .....	533
File systems .....	Gets file system statistics .....	ustat(2) .....	571
Files .....	Controls open files .....	fcntl(2) .....	121
Files .....	Gets the privilege assignment list (PAL) and privilege		
	sets of a file .....	getpal(2) .....	167
Files .....	Allocates storage for a file .....	ialloc(2) .....	211
Files .....	Sets metadata for a file .....	lsetattr(2) .....	252
Files .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Files .....	Sets file compartments .....	setfcmp(2) .....	402
Files .....	Sets file security flags .....	setfflg(2) .....	405
Files .....	Gets file status .....	stat(2) .....	503
Files .....	Gets file system information .....	statvfs(2) .....	514
Files .....	Truncates a file .....	trunc(2) .....	552
Files .....	Writes on a file .....	write(2) .....	590
Files .....	Performs asynchronous write on a file .....	writea(2) .....	596
Files .....	Changes owner and group of a file .....	chown(2) .....	75
fjoin(2) .....	Joins files .....	join(2) .....	221
Flags .....	Opens a file for reading or writing .....	open(2) .....	287
Flags .....	Sets file security flags .....	setfflg(2) .....	405
Flushes system buffers out of main			
memory .....	Flushes system buffers out of main memory .....	sync(2) .....	526
fork(2) .....	Creates a new process .....	fork(2) .....	131
fpathconf(2) .....	Determines value of file or directory limit .....	pathconf(2) .....	299
fsecstat(2) .....	Gets file security attributes .....	secstat(2) .....	371
fsetpal(2) .....	Sets the privilege assignment list (PAL) and privilege		
	sets of a file .....	fsetpal(2) .....	136
fstat(2) .....	Gets file status .....	stat(2) .....	503
fstatfs(2) .....	Gets file system information .....	statfs(2) .....	509
fstatvfs(2) .....	Gets file system information .....	statvfs(2) .....	514
fsync(2) .....	Synchronizes the in-core state of a file with that on		
	disk .....	fsync(2) .....	138
Generates an execution time profile .....	Generates an execution time profile .....	profil(2) .....	314
Generation numbers .....	Changes a directory by using the inode number .....	chdir(2) .....	61
getash(2) .....	Gets an array session handle .....	getash(2) .....	140
getdents(2) .....	Reads and formats directory entries as file system		
	independent .....	getdents(2) .....	141
getdevn(2) .....	Gets device number or driver entry .....	getdevn(2) .....	143
getegid(2) .....	Gets real user, effective user, real group, or effective		
	group IDs .....	getuid(2) .....	197
geteuid(2) .....	Gets real user, effective user, real group, or effective		
	group IDs .....	getuid(2) .....	197
getfac1(2) .....	Gets access control list entries for file .....	getfac1(2) .....	144
getgid(2) .....	Gets real user, effective user, real group, or effective		
	group IDs .....	getuid(2) .....	197
getgroups(2) .....	Gets or sets group list .....	getgroups(2) .....	148

gethostid(2) .....	Gets or sets unique identifier of local host .....	gethostid(2) .....	151
gethostname(2) .....	Gets or sets name of local host .....	gethostname(2) .....	153
getinfo(2) .....	Gets specified user, job, or process signal information ..	getinfo(2) .....	155
getjtab(2) .....	Gets the job table entry associated with a process .....	getjtab(2) .....	158
getlim(2) .....	Obtains current resource limit information .....	getlim(2) .....	160
_getlwpid(2) .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
_getlwppid(2) .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
getmount(2) .....	Returns information about the kernel mount table .....	getmount(2) .....	163
getpal(2) .....	Gets the privilege assignment list (PAL) and privilege sets of a file .....	getpal(2) .....	167
getpeername(2) .....	Gets name of connected peer .....	getpeername(2) .....	169
getpermit(2) .....	Gets or sets user permissions .....	getpermit(2) .....	172
getpgrp(2) .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
getpid(2) .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
getportbm(2) .....	Sets or gets the kernel memory port bit map .....	setportbm(2) .....	420
getppid(2) .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
getppriv(2) .....	Gets the privilege state of the calling process .....	getppriv(2) .....	179
Gets access control list entries for file .....	Gets access control list entries for file .....	getfacl(2) .....	144
Gets an array session handle .....	Gets an array session handle .....	getash(2) .....	140
Gets and sets user limits .....	Gets and sets user limits .....	ulimit(2) .....	555
Gets device number or driver entry .....	Gets device number or driver entry .....	getdevn(2) .....	143
Gets file security attributes .....	Gets file security attributes .....	secstat(2) .....	371
Gets file status .....	Gets file status .....	stat(2) .....	503
Gets file system information .....	Gets file system information .....	statfs(2) .....	509
Gets file system information .....	Gets file system information .....	statvfs(2) .....	514
Gets file system statistics .....	Gets file system statistics .....	ustat(2) .....	571
Gets file system type information .....	Gets file system type information .....	sysfs(2) .....	533
Gets information about a terminated child			
job .....	Gets information about a terminated child job .....	waitjob(2) .....	586
Gets name of connected peer .....	Gets name of connected peer .....	getpeername(2) .....	169
Gets name of current operating system .....	Gets name of current operating system .....	uname(2) .....	562
Gets or sets date and time .....	Gets or sets date and time .....	gettmeofday(2) .....	194
Gets or sets group list .....	Gets or sets group list .....	getgroups(2) .....	148
Gets or sets name of local host .....	Gets or sets name of local host .....	gethostname(2) .....	153
Gets or sets options on sockets .....	Gets or sets options on sockets .....	getsockopt(2) .....	184
Gets or sets terminal process group ID of the foreground process group .....	Gets or sets terminal process group ID of the foreground process group .....	tcgetpgrp(2) .....	543
Gets or sets unique identifier of local host ...	Gets or sets unique identifier of local host .....	gethostid(2) .....	151
Gets or sets user permissions .....	Gets or sets user permissions .....	getpermit(2) .....	172
Gets process and child process times .....	Gets process and child process times .....	times(2) .....	550
Gets process, process group, or parent process IDs .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
Gets real user, effective user, real group, or effective group IDs .....	Gets real user, effective user, real group, or effective group IDs .....	getuid(2) .....	197
Gets security attributes .....	Gets security attributes .....	getsysv(2) .....	189
Gets security names and associated values ..	Gets security names and associated values ..	getsectab(2) .....	180

Gets security validation attributes of the process .....	Gets security validation attributes of the process .....	getusrv(2) .....	199
Gets socket name .....	Gets socket name .....	getsockname(2) .....	182
Gets specified user, job, or process signal information .....	Gets specified user, job, or process signal information ..	getinfo(2) .....	155
Gets the job table entry associated with a process .....	Gets the job table entry associated with a process .....	getjtab(2) .....	158
Gets the privilege assignment list (PAL) and privilege sets of a file .....	Gets the privilege assignment list (PAL) and privilege sets of a file .....	fgetpal(2) .....	130
Gets the privilege assignment list (PAL) and privilege sets of a file .....	Gets the privilege assignment list (PAL) and privilege sets of a file .....	getpal(2) .....	167
Gets the privilege state of the calling process .....	Gets the privilege state of the calling process .....	getppriv(2) .....	179
Gets time .....	Gets time .....	time(2) .....	548
getsectab(2) .....	Gets security names and associated values .....	getsectab(2) .....	180
getsockname(2) .....	Gets socket name .....	getsockname(2) .....	182
getsockopt(2) .....	Gets or sets options on sockets .....	getsockopt(2) .....	184
getsysv(2) .....	Gets security attributes .....	getsysv(2) .....	189
gettimeofday(2) .....	Gets or sets date and time .....	gettimeofday(2) .....	194
getuid(2) .....	Gets real user, effective user, real group, or effective group IDs .....	getuid(2) .....	197
getusrv(2) .....	Gets security validation attributes of the process .....	getusrv(2) .....	199
_globalexit(2) .....	Terminates process .....	exit(2) .....	118
globalexit(2) .....	Terminates process .....	exit(2) .....	118
Group IDs .....	Sets process-group-ID for job control .....	setpgid(2) .....	416
Group IDs .....	Sets process-group ID .....	setpgrp(2) .....	418
Group IDs .....	Sets real or effective group ID .....	setregid(2) .....	423
Group IDs .....	Creates session and sets process group ID .....	setsid(2) .....	430
Group IDs .....	Gets or sets terminal process group ID of the foreground process group .....	tcgetpgrp(2) .....	543
Groups .....	Gets or sets group list .....	getgroups(2) .....	148
Groups .....	Changes owner and group of a file .....	chown(2) .....	75
guestctl(2) .....	Controls and reports the status of major guest system functions .....	guestctl(2) .....	202
Hardware registers .....	Exchanges control .....	exctl(2) .....	109
Header information .....	Manipulates file system quotas .....	quotactl(2) .....	322
Host names .....	Gets or sets name of local host .....	gethostname(2) .....	153
Hosts .....	Gets or sets unique identifier of local host .....	gethostid(2) .....	151
Hosts .....	Gets name of connected peer .....	getpeername(2) .....	169
Hosts .....	Retrieves or modifies machine characteristics .....	target(2) .....	541
ialloc(2) .....	Allocates storage for a file .....	ialloc(2) .....	211
Initiates a connection on a socket .....	Initiates a connection on a socket .....	connect(2) .....	84
Initiates a list of I/O requests .....	Initiates a list of I/O requests .....	listio(2) .....	243
Inode numbers .....	Opens a file by using the inode number .....	openi(2) .....	297
Inode numbers .....	Changes a directory by using the inode number .....	chdiri(2) .....	61
Interprocess channels .....	Creates an interprocess channel .....	pipe(2) .....	307
Interprocess communication .....	Accesses the message queue .....	msgget(2) .....	269

Interprocess communication .....	Reads a message from a message queue .....	msgrecv(2) .....	271
Interprocess communication .....	Sends a message to a message queue .....	msgsnd(2) .....	274
Interprocess communication .....	Provides semaphore control operations .....	semctl(2) .....	378
Interprocess communication .....	Provides access to semaphore identifiers .....	semget(2) .....	383
Interprocess communication .....	Provides general semaphore operations .....	semop(2) .....	386
Interprocess communication .....	Attaches shared memory segment .....	shmat(2) .....	447
Interprocess communication .....	Provides shared memory control operations .....	shmctl(2) .....	450
Interprocess communication .....	Detaches shared memory segment .....	shmdt(2) .....	455
Interprocess communication .....	Accesses shared memory identifier .....	shmget(2) .....	457
intro(2) .....	Introduces system calls and error numbers ..	intro(2) .....	1
Introduces system calls and error numbers ..	Introduces system calls and error numbers ..	intro(2) .....	1
I/O descriptor sets .....	Examines synchronous I/O multiplexing .....	select(2) .....	374
I/O requests .....	Initiates a list of I/O requests .....	listio(2) .....	243
I/O requests .....	Performs asynchronous read from a file .....	reada(2) .....	333
I/O requests .....	Waits for I/O completions .....	recall(2) .....	342
I/O requests .....	Waits for I/O completion(s) .....	recalla(2) .....	344
I/O requests .....	Performs asynchronous write on a file .....	writea(2) .....	596
ioctl(2) .....	Controls device .....	ioctl(2) .....	214
IPC functions .....	Provides message control operations .....	msgctl(2) .....	265
IPC functions .....	Accesses the message queue .....	msgget(2) .....	269
IPC functions .....	Reads a message from a message queue .....	msgrecv(2) .....	271
IPC functions .....	Sends a message to a message queue .....	msgsnd(2) .....	274
IPC functions .....	Provides semaphore control operations .....	semctl(2) .....	378
IPC functions .....	Provides access to semaphore identifiers .....	semget(2) .....	383
IPC functions .....	Provides general semaphore operations .....	semop(2) .....	386
IPC functions .....	Attaches shared memory segment .....	shmat(2) .....	447
IPC functions .....	Provides shared memory control operations .....	shmctl(2) .....	450
IPC functions .....	Detaches shared memory segment .....	shmdt(2) .....	455
IPC functions .....	Accesses shared memory identifier .....	shmget(2) .....	457
jacct(2) .....	Enables or disables job accounting .....	jacct(2) .....	219
Jobs .....	Gets specified user, job, or process signal information ..	getinfo(2) .....	155
Jobs .....	Gets the job table entry associated with a process .....	getjtab(2) .....	158
Jobs .....	Enables or disables job accounting .....	jacct(2) .....	219
Jobs .....	Restarts a process, multitask group, or job .....	restart(2) .....	357
Jobs .....	Sets job ID .....	setjob(2) .....	409
Jobs .....	Sets process-group-ID for job control .....	setpgid(2) .....	416
Jobs .....	Gets information about a terminated child job .....	waitjob(2) .....	586
Jobs .....	Checkpoints a process, multitask group, or job .....	chkpnt(2) .....	63
join(2) .....	Joins files .....	join(2) .....	221
Joins files .....	Joins files .....	join(2) .....	221
Kernel limits .....	Returns or sets limits structure for fair-share scheduler .....	limits(2) .....	232
Kernel memory .....	Sets or gets the kernel memory port bit map .....	setportbm(2) .....	420
Kernel mount table .....	Returns information about the kernel mount table .....	getmount(2) .....	163
kill(2) .....	Sends a signal to a process or a group of processes .....	kill(2) .....	223
killm(2) .....	Sends a signal to a process or a group of processes .....	kill(2) .....	223
Large file allocation strategy .....	Opens a file for reading or writing .....	open(2) .....	287
lchown(2) .....	Changes owner and group of a file .....	chown(2) .....	75

Level ranges .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
Levels .....	Sets security level of a file .....	setflvl(2) .....	407
Levels .....	Sets security validation attributes of the process .....	setusrv(2) .....	444
limit(2) .....	Sets resource limits .....	limit(2) .....	227
Limits .....	Obtains current resource limit information .....	getlim(2) .....	160
Limits .....	Determines value of file or directory limit .....	pathconf(2) .....	299
Limits .....	Sets user-controllable resource limits .....	setlim(2) .....	411
Limits .....	Gets and sets user limits .....	ulimit(2) .....	555
limits(2) .....	Returns or sets limits structure for fair-share scheduler .....	limits(2) .....	232
link(2) .....	Creates a link to a file .....	link(2) .....	235
Links .....	Reads value of a symbolic link .....	readlink(2) .....	339
Links .....	Makes a symbolic link to a file .....	symlink(2) .....	522
listen(2) .....	Listens for connections on a socket .....	listen(2) .....	239
Listens for connections on a socket .....	Listens for connections on a socket .....	listen(2) .....	239
listio(2) .....	Initiates a list of I/O requests .....	listio(2) .....	243
Lnodes .....	Returns or sets limits structure for fair-share scheduler .....	limits(2) .....	232
Local area network .....	Corrects the time to allow synchronization of the system clock .....	adjtime(2) .....	44
Local hosts .....	Gets or sets unique identifier of local host .....	gethostid(2) .....	151
Local hosts .....	Gets or sets name of local host .....	gethostname(2) .....	153
_localexit(2) .....	Terminates process .....	exit(2) .....	118
localexit(2) .....	Terminates process .....	exit(2) .....	118
Locks process in memory .....	Locks process in memory .....	plock(2) .....	310
Log entries .....	Makes security log entry .....	slgentry(2) .....	486
lsecstat(2) .....	Gets file security attributes .....	secstat(2) .....	371
lseek(2) .....	Moves read/write file pointer .....	lseek(2) .....	249
lsetattr(2) .....	Sets metadata for a file .....	lsetattr(2) .....	252
lstat(2) .....	Gets file status .....	stat(2) .....	503
_lwp_alarm(2) .....	Sets a process alarm clock .....	alarm(2) .....	46
_lwp_exit(2) .....	Terminates process .....	exit(2) .....	118
_lwp_kill(2) .....	Sends a signal to a process or a group of processes .....	kill(2) .....	223
_lwp_killm(2) .....	Sends a signal to a process or a group of processes .....	kill(2) .....	223
Machine characteristics .....	Retrieves or modifies machine characteristics .....	target(2) .....	541
Makes a directory .....	Makes a directory .....	mkdir(2) .....	254
Makes a directory or a special or regular file .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Makes a symbolic link to a file .....	Makes a symbolic link to a file .....	symlink(2) .....	522
Makes security log entry .....	Makes security log entry .....	slgentry(2) .....	486
Manages pty reconnection .....	Manages pty reconnection .....	ptyrecon(2) .....	320
Manipulates file system quotas .....	Manipulates file system quotas .....	quotactl(2) .....	322
Maximum authorized compartments .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
Maximum level ranges .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
Memory availability .....	Retrieves or modifies system physical memory availability .....	chmem(2) .....	69

Memory scheduling .....	Sets memory scheduling parameters .....	schedv(2) .....	368
Message queues .....	Provides message control operations .....	msgctl(2) .....	265
Message queues .....	Accesses the message queue .....	msgget(2) .....	269
Message queues .....	Reads a message from a message queue .....	msgrcv(2) .....	271
Message queues .....	Sends a message to a message queue .....	msgsnd(2) .....	274
Metadata .....	Sets metadata for a file .....	lsetattr(2) .....	252
Minimum authorized compartments .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
mkdir(2) .....	Makes a directory .....	mkdir(2) .....	254
mkfifo(2) .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
mknod(2) .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Modes .....	Changes the mode of a file .....	chmod(2) .....	71
Modes .....	Creates a new file or rewrites an existing one .....	creat(2) .....	90
mount(2) .....	Mounts a file system .....	mount(2) .....	262
Mounts a file system .....	Mounts a file system .....	mount(2) .....	262
Moves read/write file pointer .....	Moves read/write file pointer .....	lseek(2) .....	249
msgctl(2) .....	Provides message control operations .....	msgctl(2) .....	265
msgget(2) .....	Accesses the message queue .....	msgget(2) .....	269
msgrcv(2) .....	Reads a message from a message queue .....	msgrcv(2) .....	271
msgsnd(2) .....	Sends a message to a message queue .....	msgsnd(2) .....	274
mtimes(2) .....	Provides multitasking execution overlap profile .....	mtimes(2) .....	277
Multiplexing .....	Examines synchronous I/O multiplexing .....	select(2) .....	374
Multitask groups .....	Checkpoints a process, multitask group, or job .....	chkpnt(2) .....	63
Multitasking .....	Provides multitasking execution overlap profile .....	mtimes(2) .....	277
Multitasking .....	Restarts a process, multitask group, or job .....	restart(2) .....	357
Multitasking .....	Creates a multitasking process .....	_tfork(2) .....	545
Named pipes .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Names .....	Gets name of current operating system .....	uname(2) .....	562
Networks .....	Accesses or manipulates network security information .....	nsecctl(2) .....	284
New processes .....	Executes a file .....	exec(2) .....	111
New processes .....	Creates a new process .....	fork(2) .....	131
New processes .....	Creates a new process in a memory efficient way .....	vfork(2) .....	577
newarraysess(2) .....	Starts a new array session .....	newarraysess(2) .....	279
_newexit(2) .....	Terminates process .....	exit(2) .....	118
newexit(2) .....	Terminates process .....	exit(2) .....	118
newgetpid(2) .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
newgetppid(2) .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
nice(2) .....	Changes priority of processes .....	nice(2) .....	281
nicem(2) .....	Changes priority of processes .....	nice(2) .....	281
nsecctl(2) .....	Accesses or manipulates network security information .....	nsecctl(2) .....	284
Obtains current resource limit information ..	Obtains current resource limit information .....	getlim(2) .....	160
open(2) .....	Opens a file for reading or writing .....	open(2) .....	287
openi(2) .....	Opens a file by using the inode number .....	openi(2) .....	297
Opens a file by using the inode number .....	Opens a file by using the inode number .....	openi(2) .....	297
Opens a file for reading or writing .....	Opens a file for reading or writing .....	open(2) .....	287
Operating system names .....	Gets name of current operating system .....	uname(2) .....	562
Owners .....	Changes owner and group of a file .....	chown(2) .....	75

Parent process IDs .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
pathconf(2) .....	Determines value of file or directory limit .....	pathconf(2) .....	299
pause(2) .....	Suspends process until signal .....	pause(2) .....	305
Peer names .....	Gets name of connected peer .....	getpeername(2) .....	169
Performs asynchronous read from a file .....	Performs asynchronous read from a file .....	reada(2) .....	333
Performs asynchronous write on a file .....	Performs asynchronous write on a file .....	writea(2) .....	596
Permissions .....	Gets or sets user permissions .....	getpermit(2) .....	172
Permissions .....	Determines accessibility of a file .....	access(2) .....	33
Permissions .....	Sets file security label and security flag attributes .....	setdevs(2) .....	395
Permissions .....	Sets security validation attributes of the process .....	setusrv(2) .....	444
Physical memory availability .....	Retrieves or modifies system physical memory availability .....	chmem(2) .....	69
pipe(2) .....	Creates an interprocess channel .....	pipe(2) .....	307
Pipes .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Pipes .....	Writes on a file .....	write(2) .....	590
plock(2) .....	Locks process in memory .....	plock(2) .....	310
policy(2) .....	Returns or sets information on the CPU allocation policy .....	policy(2) .....	312
Port bit map .....	Sets or gets the kernel memory port bit map .....	setportbm(2) .....	420
Priorities .....	Changes priority of processes .....	nice(2) .....	281
Privilege policy .....	Gets the privilege assignment list (PAL) and privilege sets of a file .....	fgetpal(2) .....	130
Privilege policy .....	Sets the privilege assignment list (PAL) and privilege sets of a file .....	fsetpal(2) .....	136
Privilege policy .....	Gets the privilege assignment list (PAL) and privilege sets of a file .....	getpal(2) .....	167
Privilege policy .....	Gets the privilege state of the calling process .....	getppriv(2) .....	179
Privilege policy .....	Sets the privilege assignment list (PAL) and privilege sets of a file .....	setpal(2) .....	414
Privilege policy .....	Sets the privilege state of the calling process .....	setppriv(2) .....	422
Privilege policy .....	Compares the supplied character sequence with the privilege text of the calling process .....	cmptext(2) .....	82
Process account IDs .....	Changes account ID of a process .....	acctid(2) .....	42
Process accounting .....	Enables or disables process accounting .....	acct(2) .....	37
Process accounting .....	Checks status of, enables, and disables process, daemon, and record accounting .....	acctctl(2) .....	39
Process accounting .....	Enables or disables process and daemon accounting .....	dacct(2) .....	97
Process group IDs .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
Process group IDs .....	Gets or sets terminal process group ID of the foreground process group .....	tcgetpgrp(2) .....	543
Process IDs .....	Gets process, process group, or parent process IDs .....	getpid(2) .....	176
Process priorities .....	Changes priority of processes .....	nice(2) .....	281
Process scheduling .....	Reschedules a process .....	resch(2) .....	356
Process' security attributes .....	Gets security validation attributes of the process .....	getusrv(2) .....	199
Process' security validation attributes .....	Gets security validation attributes of the process .....	getusrv(2) .....	199
Process termination .....	Terminates process .....	exit(2) .....	118
Processes .....	Creates a new process .....	fork(2) .....	131
Processes .....	Gets specified user, job, or process signal information ..	getinfo(2) .....	155
Processes .....	Gets the job table entry associated with a process .....	getjtab(2) .....	158

Processes .....	Sends a signal to a process or a group of processes .....	kill(2) .....	223
Processes .....	Locks process in memory .....	plock(2) .....	310
Processes .....	Traces processes .....	ptrace(2) .....	316
Processes .....	Restarts a process, multitask group, or job .....	restart(2) .....	357
Processes .....	Sets process-group-ID for job control .....	setpgid(2) .....	416
Processes .....	Sets process-group ID .....	setpgrp(2) .....	418
Processes .....	Creates session and sets process group ID .....	setsid(2) .....	430
Processes .....	Controls execution of processes .....	suspend(2) .....	518
Processes .....	Creates a multitasking process .....	_tfork(2) .....	545
Processes .....	Registers this process as a thread .....	thread(2) .....	546
Processes .....	Gets process and child process times .....	times(2) .....	550
Processes .....	Creates a new process in a memory efficient way .....	vfork(2) .....	577
Processes .....	Checkpoints a process, multitask group, or job .....	chkpnt(2) .....	63
Processes .....	Selects which processors may run the process .....	cpselect(2) .....	88
Processes offline file requests .....	Processes offline file requests .....	dmofrq(2) .....	103
profil(2) .....	Generates an execution time profile .....	profil(2) .....	314
Profiles .....	Provides multitasking execution overlap profile .....	mtimes(2) .....	277
Provides a system interface to Silicon Graphics workstations .....	Provides a system interface to Silicon Graphics workstations .....	syssgi(2) .....	536
Provides access to semaphore identifiers .....	Provides access to semaphore identifiers .....	semget(2) .....	383
Provides general semaphore operations .....	Provides general semaphore operations .....	semop(2) .....	386
Provides generalized signal control .....	Provides generalized signal control .....	sigctl(2) .....	466
Provides message control operations .....	Provides message control operations .....	msgctl(2) .....	265
Provides multitasking execution overlap profile .....	Provides multitasking execution overlap profile .....	mtimes(2) .....	277
Provides semaphore control operations .....	Provides semaphore control operations .....	semctl(2) .....	378
Provides shared memory control operations .....	Provides shared memory control operations .....	shmctl(2) .....	450
ptrace(2) .....	Traces processes .....	ptrace(2) .....	316
ptyrecon(2) .....	Manages pty reconnection .....	ptyrecon(2) .....	320
quotactl(2) .....	Manipulates file system quotas .....	quotactl(2) .....	322
Ranges .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
Raw mode .....	Opens a file for reading or writing .....	open(2) .....	287
read(2) .....	Reads from file .....	read(2) .....	329
reada(2) .....	Performs asynchronous read from a file .....	reada(2) .....	333
Reading files .....	Opens a file for reading or writing .....	open(2) .....	287
readlink(2) .....	Reads value of a symbolic link .....	readlink(2) .....	339
Reads a message from a message queue .....	Reads a message from a message queue .....	msgrcv(2) .....	271
Reads and formats directory entries as file system independent .....	Reads and formats directory entries as file system independent .....	getdents(2) .....	141
Reads from file .....	Reads from file .....	read(2) .....	329
Reads or writes to secondary data segment .....	Reads or writes to secondary data segment .....	ssread(2) .....	500
Reads value of a symbolic link .....	Reads value of a symbolic link .....	readlink(2) .....	339
Real group IDs .....	Gets real user, effective user, real group, or effective group IDs .....	getuid(2) .....	197

Real group IDs .....	Sets real or effective group ID .....	setregid(2) .....	423
Real group IDs .....	Sets user or group IDs .....	setuid(2) .....	438
Real user IDs .....	Gets real user, effective user, real group, or effective group IDs .....	getuid(2) .....	197
Real user IDs .....	Sets real or effective user ID .....	setreuid(2) .....	426
Real user IDs .....	Sets user or group IDs .....	setuid(2) .....	438
recall(2) .....	Waits for I/O completions .....	recall(2) .....	342
recalla(2) .....	Waits for I/O completion(s) .....	recalla(2) .....	344
recalls(2) .....	Waits for I/O completions .....	recall(2) .....	342
Receives a message from a socket .....	Receives a message from a socket .....	recv(2) .....	347
Record accounting .....	Checks status of, enables, and disables process, daemon, and record accounting .....	acctctl(2) .....	39
recv(2) .....	Receives a message from a socket .....	recv(2) .....	347
recvfrom(2) .....	Receives a message from a socket .....	recv(2) .....	347
recvmsg(2) .....	Receives a message from a socket .....	recv(2) .....	347
Registers this process as a thread .....	Registers this process as a thread .....	thread(2) .....	546
Regular files .....	Makes a directory or a special or regular file .....	mknod(2) .....	257
Release version .....	Gets name of current operating system .....	uname(2) .....	562
Releases blocked signals and waits for interrupt .....	Releases blocked signals and waits for interrupt .....	sigsuspend(2) .....	483
Removable file systems .....	Mounts a file system .....	mount(2) .....	262
Removes a directory .....	Removes a directory .....	rmdir(2) .....	363
Removes an access control list from a file .....	Removes an access control list from a file .....	rmfacl(2) .....	366
Removes directory entry .....	Removes directory entry .....	unlink(2) .....	564
rename(2) .....	Changes the name of a file .....	rename(2) .....	352
Requests .....	Retrieves system implementation information .....	sysconf(2) .....	528
resch(2) .....	Reschedules a process .....	resch(2) .....	356
Reschedules a process .....	Reschedules a process .....	resch(2) .....	356
Resource limits .....	Obtains current resource limit information .....	getlim(2) .....	160
Resource limits .....	Sets resource limits .....	limit(2) .....	227
Resource limits .....	Sets user-controllable resource limits .....	setlim(2) .....	411
Restart files .....	Checkpoints a process, multitask group, or job .....	chkpnt(2) .....	63
restart(2) .....	Restarts a process, multitask group, or job .....	restart(2) .....	357
Restarts a process, multitask group, or job .....	Restarts a process, multitask group, or job .....	restart(2) .....	357
resume(2) .....	Controls execution of processes .....	suspend(2) .....	518
Retrieval mode .....	Sets and gets data migration retrieval mode .....	dmmode(2) .....	102
Retrieves or modifies machine characteristics .....	Retrieves or modifies machine characteristics .....	target(2) .....	541
Retrieves or modifies system physical memory availability .....	Retrieves or modifies system physical memory availability .....	chmem(2) .....	69
Retrieves system implementation information .....	Retrieves system implementation information .....	sysconf(2) .....	528
Returns information about the kernel mount table .....	Returns information about the kernel mount table .....	getmount(2) .....	163
Returns information on and reads a system table .....	Returns information on and reads a system table .....	tabinfo(2) .....	538

Returns or sets information on the CPU allocation policy .....	Returns or sets information on the CPU allocation policy .....	policy(2) .....	312
Returns or sets limits structure for fair-share scheduler .....	Returns or sets limits structure for fair-share scheduler .....	limits(2) .....	232
rmdir(2) .....	Removes a directory .....	rmdir(2) .....	363
rmfacl(2) .....	Removes an access control list from a file .....	rmfacl(2) .....	366
Root directory .....	Changes the root directory .....	chroot(2) .....	79
Routine swapping .....	Locks process in memory .....	plock(2) .....	310
sbreak(2) .....	Changes data segment space allocation .....	brk(2) .....	53
sbrk(2) .....	Changes data segment space allocation .....	brk(2) .....	53
Scheduling .....	Reschedules a process .....	resch(2) .....	356
schedv(2) .....	Sets memory scheduling parameters .....	schedv(2) .....	368
Secondary data segments .....	Changes size of secondary data segment .....	ssbreak(2) .....	497
Secondary data segments .....	Reads or writes to secondary data segment .....	ssread(2) .....	500
secstat(2) .....	Gets file security attributes .....	secstat(2) .....	371
Security administrator category .....	Gets access control list entries for file .....	getfacl(2) .....	144
Security attributes .....	Gets security attributes .....	getsysv(2) .....	189
Security attributes .....	Gets security validation attributes of the process .....	getusrv(2) .....	199
Security attributes .....	Gets file security attributes .....	secstat(2) .....	371
Security attributes .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
Security flags .....	Sets file security flags .....	setfflg(2) .....	405
Security information .....	Accesses or manipulates network security information .....	nsecctl(2) .....	284
Security levels .....	Sets the active security level of the process .....	setulvl(2) .....	442
Security log .....	Gets access control list entries for file .....	getfacl(2) .....	144
Security log .....	Gets security validation attributes of the process .....	getusrv(2) .....	199
Security log .....	Removes an access control list from a file .....	rmfacl(2) .....	366
Security log .....	Sets file security label and security flag attributes .....	setdevs(2) .....	395
Security log .....	Sets access control list for file .....	setfacl(2) .....	398
Security log .....	Sets file compartments .....	setfcmp(2) .....	402
Security log .....	Sets security level of a file .....	setflvl(2) .....	407
Security log .....	Sets active compartments of the process .....	setucmp(2) .....	436
Security log .....	Sets the active security level of the process .....	setulvl(2) .....	442
Security log .....	Sets security validation attributes of the process .....	setusrv(2) .....	444
Security log .....	Makes security log entry .....	slgentry(2) .....	486
select(2) .....	Examines synchronous I/O multiplexing .....	select(2) .....	374
Selects which processors may run the process .....	Selects which processors may run the process .....	cpselect(2) .....	88
Semaphore control operations .....	Provides semaphore control operations .....	semctl(2) .....	378
Semaphore control operations .....	Provides access to semaphore identifiers .....	semget(2) .....	383
Semaphore control operations .....	Provides general semaphore operations .....	semop(2) .....	386
semctl(2) .....	Provides semaphore control operations .....	semctl(2) .....	378
semget(2) .....	Provides access to semaphore identifiers .....	semget(2) .....	383
semop(2) .....	Provides general semaphore operations .....	semop(2) .....	386
send(2) .....	Sends a message from a socket .....	send(2) .....	390
sendmsg(2) .....	Sends a message from a socket .....	send(2) .....	390

Sends a message from a socket .....	Sends a message from a socket .....	send(2) .....	390
Sends a message to a message queue .....	Sends a message to a message queue .....	msgsnd(2) .....	274
Sends a signal to a process or a group of processes .....	Sends a signal to a process or a group of processes .....	kill(2) .....	223
sendto(2) .....	Sends a message from a socket .....	send(2) .....	390
Session creation .....	Creates session and sets process group ID .....	setsid(2) .....	430
setash(2) .....	Sets an array session handle .....	setash(2) .....	393
setdevs(2) .....	Sets file security label and security flag attributes .....	setdevs(2) .....	395
setegid(2) .....	Sets real or effective group ID .....	setregid(2) .....	423
seteuid(2) .....	Sets real or effective user ID .....	setreuid(2) .....	426
setfac1(2) .....	Sets access control list for file .....	setfac1(2) .....	398
setfcmp(2) .....	Sets file compartments .....	setfcmp(2) .....	402
setfflg(2) .....	Sets file security flags .....	setfflg(2) .....	405
setflvl(2) .....	Sets security level of a file .....	setflvl(2) .....	407
setgid(2) .....	Sets user or group IDs .....	setuid(2) .....	438
Set-group-ID bit .....	Changes owner and group of a file .....	chown(2) .....	75
setgroups(2) .....	Gets or sets group list .....	getgroups(2) .....	148
sethostid(2) .....	Gets or sets unique identifier of local host .....	gethostid(2) .....	151
sethostname(2) .....	Gets or sets name of local host .....	gethostname(2) .....	153
setjob(2) .....	Sets job ID .....	setjob(2) .....	409
setlim(2) .....	Sets user-controllable resource limits .....	setlim(2) .....	411
setpal(2) .....	Sets the privilege assignment list (PAL) and privilege sets of a file .....	setpal(2) .....	414
setpermit(2) .....	Gets or sets user permissions .....	getpermit(2) .....	172
setpgid(2) .....	Sets process-group-ID for job control .....	setpgid(2) .....	416
setpgrp(2) .....	Sets process-group ID .....	setpgrp(2) .....	418
setportbm(2) .....	Sets or gets the kernel memory port bit map .....	setportbm(2) .....	420
setppriv(2) .....	Sets the privilege state of the calling process .....	setppriv(2) .....	422
setregid(2) .....	Sets real or effective group ID .....	setregid(2) .....	423
setreuid(2) .....	Sets real or effective user ID .....	setreuid(2) .....	426
setrgid(2) .....	Sets real or effective group ID .....	setregid(2) .....	423
setruid(2) .....	Sets real or effective user ID .....	setreuid(2) .....	426
Sets a process alarm clock .....	Sets a process alarm clock .....	alarm(2) .....	46
Sets access control list for file .....	Sets access control list for file .....	setfac1(2) .....	398
Sets active categories of a process .....	Sets active categories of a process .....	setucat(2) .....	434
Sets active compartments of the process .....	Sets active compartments of the process .....	setucmp(2) .....	436
Sets an array session handle .....	Sets an array session handle .....	setash(2) .....	393
Sets and gets data migration retrieval mode .....	Sets and gets data migration retrieval mode .....	dmmode(2) .....	102
Sets and gets file creation mask .....	Sets and gets file creation mask .....	umask(2) .....	558
Sets file access and modification times .....	Sets file access and modification times .....	utime(2) .....	573
Sets file compartments .....	Sets file compartments .....	setfcmp(2) .....	402
Sets file security flags .....	Sets file security flags .....	setfflg(2) .....	405
Sets file security label and security flag attributes .....	Sets file security label and security flag attributes .....	setdevs(2) .....	395
Sets job ID .....	Sets job ID .....	setjob(2) .....	409
Sets memory scheduling parameters .....	Sets memory scheduling parameters .....	schedv(2) .....	368
Sets metadata for a file .....	Sets metadata for a file .....	lsetattr(2) .....	252

Sets minimum and maximum level range, authorized compartments, and security auditing options .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	<i>setsysv(2)</i> ..... 431
Sets or gets the kernel memory port bit map .....	Sets or gets the kernel memory port bit map .....	<i>setportbm(2)</i> ..... 420
Sets process-group ID .....	Sets process-group ID .....	<i>setpggrp(2)</i> ..... 418
Sets process-group-ID for job control .....	Sets process-group-ID for job control .....	<i>setpgid(2)</i> ..... 416
Sets real or effective group ID .....	Sets real or effective group ID .....	<i>setregid(2)</i> ..... 423
Sets real or effective user ID .....	Sets real or effective user ID .....	<i>setreuid(2)</i> ..... 426
Sets resource limits .....	Sets resource limits .....	<i>limit(2)</i> ..... 227
Sets security level of a file .....	Sets security level of a file .....	<i>setflvl(2)</i> ..... 407
Sets security validation attributes of the process .....	Sets security validation attributes of the process .....	<i>setusrv(2)</i> ..... 444
Sets the active security level of the process .....	Sets the active security level of the process .....	<i>setulvl(2)</i> ..... 442
Sets the privilege assignment list (PAL) and privilege sets of a file .....	Sets the privilege assignment list (PAL) and privilege sets of a file .....	<i>fsetpal(2)</i> ..... 136
Sets the privilege assignment list (PAL) and privilege sets of a file .....	Sets the privilege assignment list (PAL) and privilege sets of a file .....	<i>setpal(2)</i> ..... 414
Sets the privilege state of the calling process .....	Sets the privilege state of the calling process .....	<i>setppriv(2)</i> ..... 422
Sets time .....	Sets time .....	<i>stime(2)</i> ..... 517
Sets user or group IDs .....	Sets user or group IDs .....	<i>setuid(2)</i> ..... 438
Sets user-controllable resource limits .....	Sets user-controllable resource limits .....	<i>setlim(2)</i> ..... 411
<i>setsid(2)</i> .....	Creates session and sets process group ID .....	<i>setsid(2)</i> ..... 430
<i>setsockopt(2)</i> .....	Gets or sets options on sockets .....	<i>getsockopt(2)</i> ..... 184
<i>setsysv(2)</i> .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	<i>setsysv(2)</i> ..... 431
<i>settimeofday(2)</i> .....	Gets or sets date and time .....	<i>gettimeofday(2)</i> ..... 194
<i>setucat(2)</i> .....	Sets active categories of a process .....	<i>setucat(2)</i> ..... 434
<i>setucmp(2)</i> .....	Sets active compartments of the process .....	<i>setucmp(2)</i> ..... 436
<i>setuid(2)</i> .....	Sets user or group IDs .....	<i>setuid(2)</i> ..... 438
<i>setulvl(2)</i> .....	Sets the active security level of the process .....	<i>setulvl(2)</i> ..... 442
Set-user-ID bit .....	Changes owner and group of a file .....	<i>chown(2)</i> ..... 75
<i>setusrv(2)</i> .....	Sets security validation attributes of the process .....	<i>setusrv(2)</i> ..... 444
Shared memory control functions .....	Accesses shared memory identifier .....	<i>shmget(2)</i> ..... 457
Shared memory control operations .....	Detaches shared memory segment .....	<i>shmdt(2)</i> ..... 455
Shared memory operations .....	Attaches shared memory segment .....	<i>shmat(2)</i> ..... 447
Shared memory segments .....	Provides shared memory control operations .....	<i>shmctl(2)</i> ..... 450
<i>shmat(2)</i> .....	Attaches shared memory segment .....	<i>shmat(2)</i> ..... 447
<i>shmctl(2)</i> .....	Provides shared memory control operations .....	<i>shmctl(2)</i> ..... 450
<i>shmdt(2)</i> .....	Detaches shared memory segment .....	<i>shmdt(2)</i> ..... 455
<i>shmget(2)</i> .....	Accesses shared memory identifier .....	<i>shmget(2)</i> ..... 457
<i>shutdown(2)</i> .....	Shuts down part of a full-duplex connection .....	<i>shutdown(2)</i> ..... 460
Shuts down part of a full-duplex connection .....	Shuts down part of a full-duplex connection .....	<i>shutdown(2)</i> ..... 460

sigaction(2) .....	Examines or changes action associated with a signal ....	sigaction(2) .....	462
sigblock(2) .....	Examines and changes blocked signals .....	sigprocmask(2) .....	479
sigctl(2) .....	Provides generalized signal control .....	sigctl(2) .....	466
sighold(2) .....	Examines and changes blocked signals .....	sigprocmask(2) .....	479
sigignore(2) .....	Changes action associated with a signal .....	signal(2) .....	470
Signal handlers .....	Initiates a list of I/O requests .....	listio(2) .....	243
signal(2) .....	Changes action associated with a signal .....	signal(2) .....	470
Signals .....	Sends a signal to a process or a group of processes .....	kill(2) .....	223
Signals .....	Suspends process until signal .....	pause(2) .....	305
Signals .....	Examines or changes action associated with a signal ....	sigaction(2) .....	462
Signals .....	Provides generalized signal control .....	sigctl(2) .....	466
Signals .....	Changes action associated with a signal .....	signal(2) .....	470
Signals .....	Stores pending signals .....	sigpending(2) .....	477
Signals .....	Examines and changes blocked signals .....	sigprocmask(2) .....	479
Signals .....	Releases blocked signals and waits for interrupt .....	sigsuspend(2) .....	483
sigpause(2) .....	Releases blocked signals and waits for interrupt .....	sigsuspend(2) .....	483
sigpending(2) .....	Stores pending signals .....	sigpending(2) .....	477
sigprocmask(2) .....	Examines and changes blocked signals .....	sigprocmask(2) .....	479
sigrelse(2) .....	Examines and changes blocked signals .....	sigprocmask(2) .....	479
sigset(2) .....	Changes action associated with a signal .....	signal(2) .....	470
sigsetmask(2) .....	Examines and changes blocked signals .....	sigprocmask(2) .....	479
sigsuspend(2) .....	Releases blocked signals and waits for interrupt .....	sigsuspend(2) .....	483
sigvec(2) .....	Examines or changes action associated with a signal ....	sigaction(2) .....	462
slgentry(2) .....	Makes security log entry .....	slgentry(2) .....	486
Socket descriptors .....	Creates a pair of connected sockets .....	socketpair(2) .....	495
Socket system calls .....	Introduces system calls and error numbers .....	intro(2) .....	1
socket(2) .....	Creates an endpoint for communication .....	socket(2) .....	488
socketpair(2) .....	Creates a pair of connected sockets .....	socketpair(2) .....	495
Sockets .....	Gets name of connected peer .....	getpeername(2) .....	169
Sockets .....	Gets socket name .....	getsockname(2) .....	182
Sockets .....	Gets or sets options on sockets .....	getsockopt(2) .....	184
Sockets .....	Listens for connections on a socket .....	listen(2) .....	239
Sockets .....	Accepts a connection on a socket .....	accept(2) .....	29
Sockets .....	Receives a message from a socket .....	recv(2) .....	347
Sockets .....	Sends a message from a socket .....	send(2) .....	390
Sockets .....	Shuts down part of a full-duplex connection .....	shutdown(2) .....	460
Sockets .....	Creates an endpoint for communication .....	socket(2) .....	488
Sockets .....	Binds a name to a socket .....	bind(2) .....	49
Sockets .....	Creates a pair of connected sockets .....	socketpair(2) .....	495
Sockets .....	Initiates a connection on a socket .....	connect(2) .....	84
Space allocation .....	Changes data segment space allocation .....	brk(2) .....	53
Special files .....	Opens a file for reading or writing .....	open(2) .....	287
ssbreak(2) .....	Changes size of secondary data segment .....	ssbreak(2) .....	497
SSD memory .....	Opens a file for reading or writing .....	open(2) .....	287
SSD Solid-state storage devices .....	Changes size of secondary data segment .....	ssbreak(2) .....	497
SSD solid-state storage devices .....	Reads or writes to secondary data segment .....	ssread(2) .....	500
ssread(2) .....	Reads or writes to secondary data segment .....	ssread(2) .....	500
sswrite(2) .....	Reads or writes to secondary data segment .....	ssread(2) .....	500
Starts a new array session .....	Starts a new array session .....	newarraysess(2) .....	279

stat(2) .....	Gets file status .....	stat(2) .....	503
statfs(2) .....	Gets file system information .....	statfs(2) .....	509
Statistics .....	Gets file system statistics .....	ustat(2) .....	571
Status .....	Gets file status .....	stat(2) .....	503
Status .....	Gets file system information .....	statvfs(2) .....	514
statvfs(2) .....	Gets file system information .....	statvfs(2) .....	514
stime(2) .....	Sets time .....	stime(2) .....	517
Stops the system from a user process .....	Stops the system from a user process .....	upanic(2) .....	569
Stores pending signals .....	Stores pending signals .....	sigpending(2) .....	477
suspend(2) .....	Controls execution of processes .....	suspend(2) .....	518
Suspends process until signal .....	Suspends process until signal .....	pause(2) .....	305
Symbolic links .....	Reads value of a symbolic link .....	readlink(2) .....	339
Symbolic links .....	Makes a symbolic link to a file .....	symlink(2) .....	522
symlink(2) .....	Makes a symbolic link to a file .....	symlink(2) .....	522
sync(2) .....	Flushes system buffers out of main memory .....	sync(2) .....	526
Synchronizes the in-core state of a file with that on disk .....	Synchronizes the in-core state of a file with that on disk .....	fsync(2) .....	138
sysconf(2) .....	Retrieves system implementation information .....	sysconf(2) .....	528
sysfs(2) .....	Gets file system type information .....	sysfs(2) .....	533
syssgi(2) .....	Provides a system interface to Silicon Graphics workstations .....	syssgi(2) .....	536
System buffers .....	Flushes system buffers out of main memory .....	sync(2) .....	526
System clocks .....	Corrects the time to allow synchronization of the system clock .....	adjtime(2) .....	44
System information .....	Gets file system information .....	statfs(2) .....	509
System information .....	Retrieves system implementation information .....	sysconf(2) .....	528
System information .....	Gets file system type information .....	sysfs(2) .....	533
System tables .....	Returns information on and reads a system table .....	tabinfo(2) .....	538
tabinfo(2) .....	Returns information on and reads a system table .....	tabinfo(2) .....	538
tabread(2) .....	Returns information on and reads a system table .....	tabinfo(2) .....	538
target(2) .....	Retrieves or modifies machine characteristics .....	target(2) .....	541
tcgetpgrp(2) .....	Gets or sets terminal process group ID of the foreground process group .....	tcgetpgrp(2) .....	543
tcsetpgrp(2) .....	Gets or sets terminal process group ID of the foreground process group .....	tcgetpgrp(2) .....	543
Terminates process .....	Terminates process .....	exit(2) .....	118
Termination .....	Waits for a child process to stop or terminate .....	wait(2) .....	580
Termination .....	Gets information about a terminated child job .....	waitjob(2) .....	586
texit(2) .....	Terminates process .....	exit(2) .....	118
_tfork(2) .....	Creates a multitasking process .....	_tfork(2) .....	545
tfork(2) .....	Creates a multitasking process .....	_tfork(2) .....	545
thread(2) .....	Registers this process as a thread .....	thread(2) .....	546
_threadexit(2) .....	Terminates process .....	exit(2) .....	118
Time .....	Corrects the time to allow synchronization of the system clock .....	adjtime(2) .....	44
Time .....	Sets a process alarm clock .....	alarm(2) .....	46
Time .....	Sets time .....	stime(2) .....	517
Time .....	Gets time .....	time(2) .....	548

Time limits .....	Sets user-controllable resource limits .....	setlim(2) .....	411
Time zone .....	Gets or sets date and time .....	gettimeofday(2) .....	194
time(2) .....	Gets time .....	time(2) .....	548
times(2) .....	Gets process and child process times .....	times(2) .....	550
Traces .....	Traces processes .....	ptrace(2) .....	316
Traces processes .....	Traces processes .....	ptrace(2) .....	316
trunc(2) .....	Truncates a file .....	trunc(2) .....	552
Truncates a file .....	Truncates a file .....	trunc(2) .....	552
Trusted facility management .....	Sets active categories of a process .....	setcat(2) .....	434
Types .....	Gets file system type information .....	sysfs(2) .....	533
udb structure .....	Gets or sets user permissions .....	getpermit(2) .....	172
ulimit(2) .....	Gets and sets user limits .....	ulimit(2) .....	555
umask(2) .....	Sets and gets file creation mask .....	umask(2) .....	558
umount(2) .....	Unmounts a file system .....	umount(2) .....	560
uname(2) .....	Gets name of current operating system .....	uname(2) .....	562
<b>UNICOS maximum authorized</b>			
compartments .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
<b>UNICOS maximum level ranges</b> .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
<b>UNICOS minimum authorized</b>			
compartments .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
<b>UNICOS minimum level ranges</b> .....	Sets minimum and maximum level range, authorized compartments, and security auditing options .....	setsysv(2) .....	431
<b>UNICOS under UNICOS</b> .....	Controls and reports the status of major guest system functions .....	guestctl(2) .....	202
Unique requests .....	Retrieves system implementation information .....	sysconf(2) .....	528
unlink(2) .....	Removes directory entry .....	unlink(2) .....	564
unlink2(2) .....	Removes directory entry .....	unlink(2) .....	564
Unmounts a file system .....	Unmounts a file system .....	umount(2) .....	560
upanic(2) .....	Stops the system from a user process .....	upanic(2) .....	569
Updates user execution time .....	Updates user execution time .....	utimes(2) .....	94
User IDs .....	Sets real or effective user ID .....	setreuid(2) .....	426
User information .....	Gets specified user, job, or process signal information ..	getinfo(2) .....	155
User limits .....	Gets and sets user limits .....	ulimit(2) .....	555
User memory .....	Updates user execution time .....	utimes(2) .....	94
User panic .....	Stops the system from a user process .....	upanic(2) .....	569
User permissions .....	Gets or sets user permissions .....	getpermit(2) .....	172
ustat(2) .....	Gets file system statistics .....	ustat(2) .....	571
utime(2) .....	Sets file access and modification times .....	utime(2) .....	573
Validation attributes .....	Gets security validation attributes of the process .....	getusrv(2) .....	199
vfork(2) .....	Creates a new process in a memory efficient way .....	vfork(2) .....	577
wait(2) .....	Waits for a child process to stop or terminate .....	wait(2) .....	580
waitjob(2) .....	Gets information about a terminated child job .....	waitjob(2) .....	586
waitpid(2) .....	Waits for a child process to stop or terminate .....	wait(2) .....	580
Waits for a child process to stop or terminate .....	Waits for a child process to stop or terminate .....	wait(2) .....	580
Waits for I/O completion(s) .....	Waits for I/O completion(s) .....	recalla(2) .....	344

Waits for I/O completions .....	Waits for I/O completions .....	recall(2) .....	342
Working directories .....	Changes working directory .....	chdir(2) .....	58
wracct(2) .....	Writes an accounting record to the kernel accounting file or to a daemon accounting file .....	wracct(2) .....	588
write(2) .....	Writes on a file .....	write(2) .....	590
writea(2) .....	Performs asynchronous write on a file .....	writea(2) .....	596
Writes an accounting record to the kernel accounting file or to a daemon accounting file .....	Writes an accounting record to the kernel accounting file or to a daemon accounting file .....	wracct(2) .....	588
Writes on a file .....	Writes on a file .....	write(2) .....	590
Writing files .....	Opens a file for reading or writing .....	open(2) .....	287
